

Fat Free CRM Guides

[GUIDES INDEX ▸](#)

Note: This README has been updated for the Heroku cedar stack.

Using Heroku, you can deploy a Fat Free CRM instance within minutes.

Pre-requisites

A heroku account – sign up at <https://www.heroku.com/>

The heroku toolkit – see <https://toolbelt.heroku.com/> for installation guide

DeclareVariables

Set up a Fat Free CRM Instance on Heroku

```
git clone https://github.com/fatfreecrm/fat_free_crm.git /path/to/ffcrm
cd /path/to/ffcrm
heroku login
```

Optional: when you deploy to Heroku, it injects some plugins to help with asset generation and logging. You will receive lots of @DEPRECATION

You have Rails 2.3-style plugins in vendor/plugins@ messages. To fix this, add 'rails_12factor', group: :production to your Gemfile and run `bundle install`. Don't forget to commit the change before pushing to heroku. (See [this article](#) for more details)

Push code to heroku:

```
heroku create
git push heroku master
heroku run rake db:migrate
heroku run rake ffcrm:demo:load (if you want demo data)
heroku run rake ffcrm:setup:admin USERNAME=admin PASSWORD=admin EMAIL=admin@example.com
heroku ps:scale web=1
heroku open
```

RootFile

Other useful heroku commands

```
heroku restart - restart the webserver
heroku ps - is the webserver running
heroku logs --ps web.1 --tail - tail the log of a specific webserver process
git push heroku your-branch-name:master - to push a different branch to the webserver
```
